

## Assignment 4

<u>NAME</u>	<u>ID</u>
Mohamed momen salama	19016474
Mohamed tarek aiad	19016405
Michael samir azmy	19016237
Ahmed abdallah abo_eleid	19015274

- **Application description:**

In this application we want to design and implement a email server application which is very popular and have a huge user base; we will generally provide the user with the basic email operations like show inbox, sign in, signup and send messages.

In the sign in/sign up component we used a template from the internet.

In the front end we used font awesome and bootstrap libraries.

- **Steps to run code:**

1-open the website by write ng serve –open in the terminal of the angular

2-run the server by compiling the java spring boot file

3- We run the website at port 4200

4-the GUI should open then, and you can use the program as you can

- **Design patterns:**

1-we have used factory DP to create the objects of the different mail boxes trash, inbox and sent as the mail boxes are considered a common product the factory DP could enable the user to create objects without exposing the creation logic to the client.

2-we have used singleton DP to make user class have only one instance as the application would have only one singed in user and the attributes of the class should not change.

3- we have used adapter DP to cast attributes of the functions.

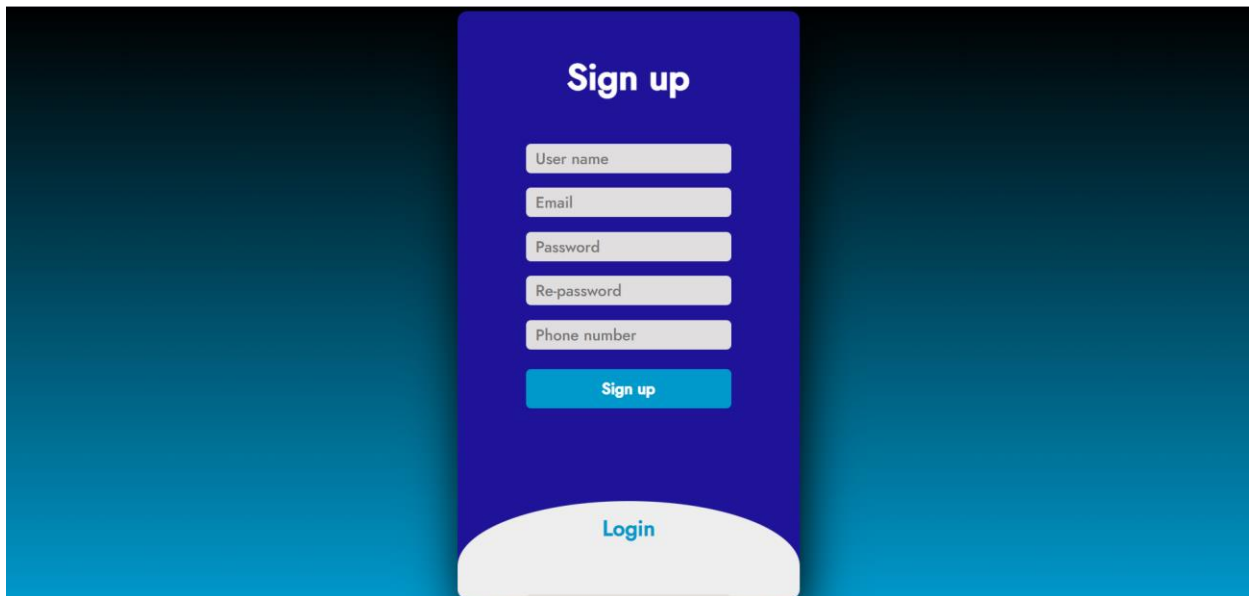

4- we have used filter design pattern to search using different attributes as date, body and sender.

5-we have used many interfaces to achieve abstraction and make client deal with interfaces not the direct object.

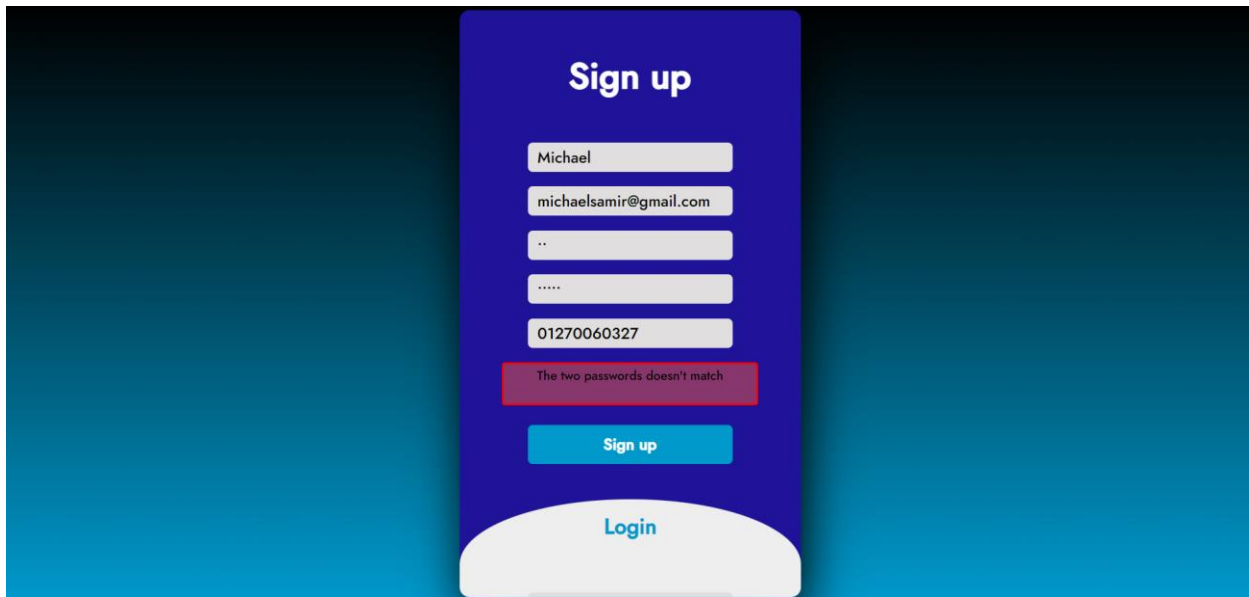

6-we used polymorphism to make the classes more flexible.

- **User guide**

When we run the web page, we will find this page

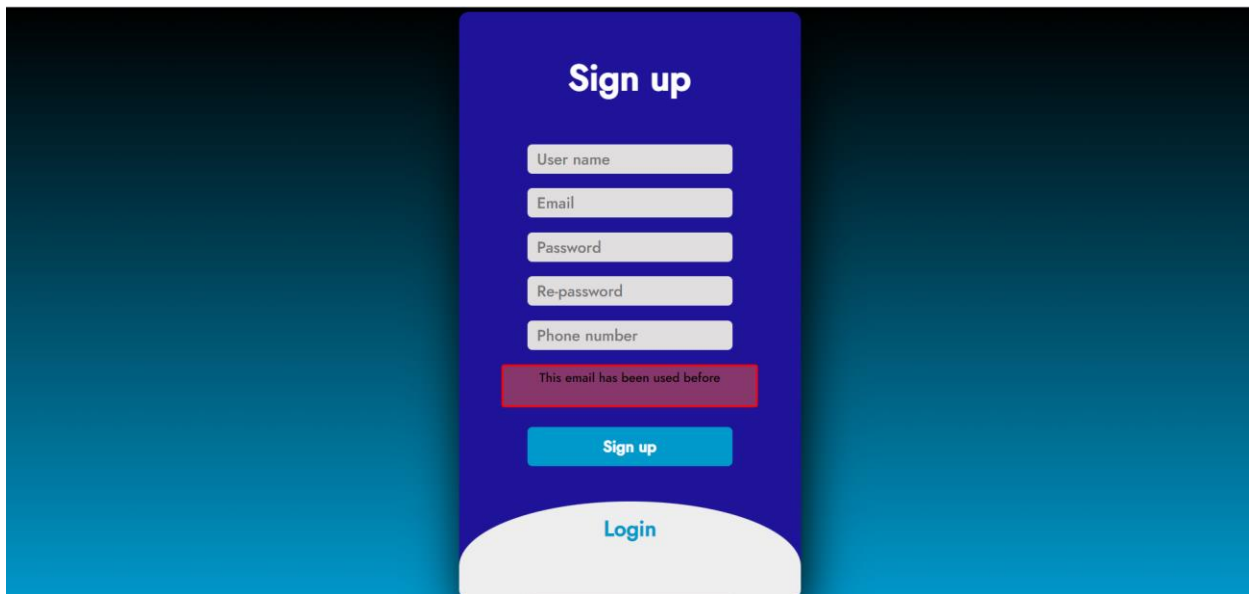

And when the password and the re-password is not the same a warning message will be displayed

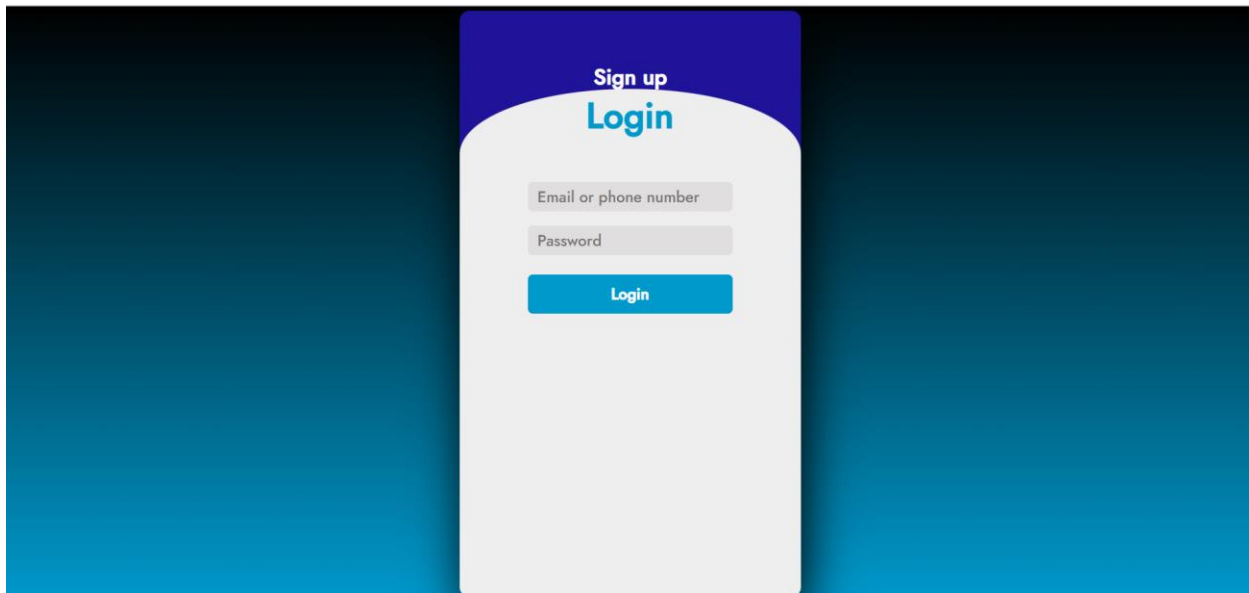

A sign-up form titled "Sign up" on a dark blue background. The form is centered and contains several input fields: "Michael" (first name), "michaelsamir@gmail.com" (email), two empty fields for last name and phone number, and two empty fields for password and re-password. Below the password fields, a red error message box displays "The two passwords doesn't match". At the bottom of the form, there is a blue "Sign up" button and a white "Login" button.

When you use email that is used before

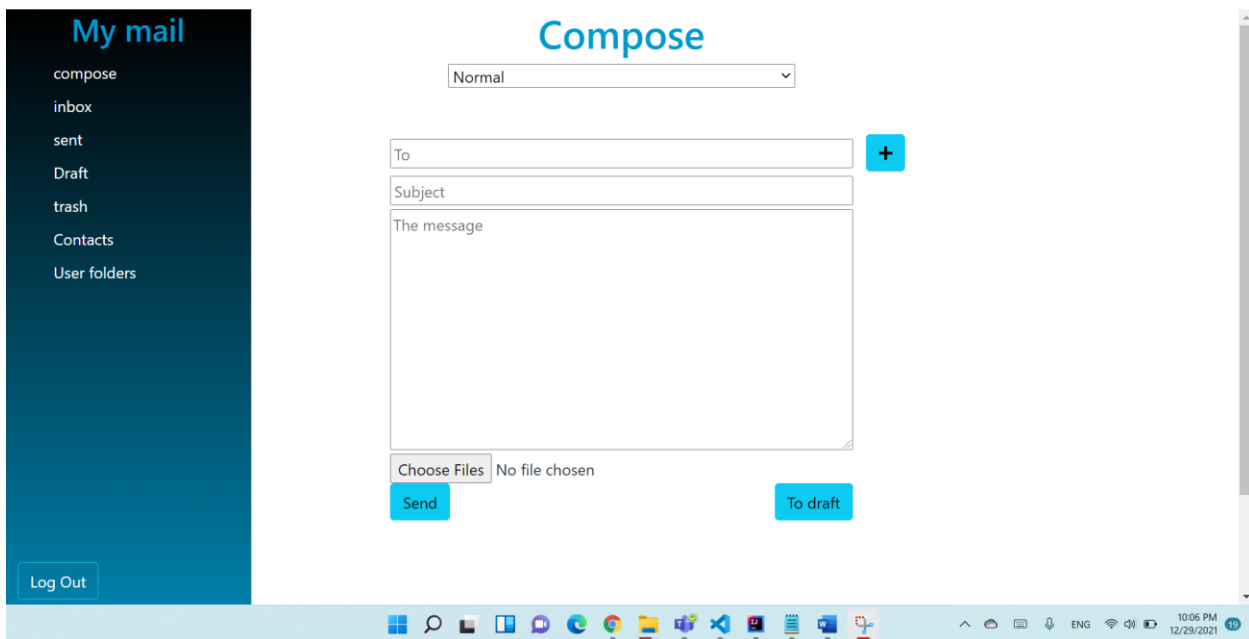

A sign-up form titled "Sign up" on a dark blue background. The form is centered and contains several input fields: "User name", "Email", "Password", "Re-password", and "Phone number". Below the "Email" field, a red error message box displays "This email has been used before". At the bottom of the form, there is a blue "Sign up" button and a white "Login" button.

A warning message will be displayed

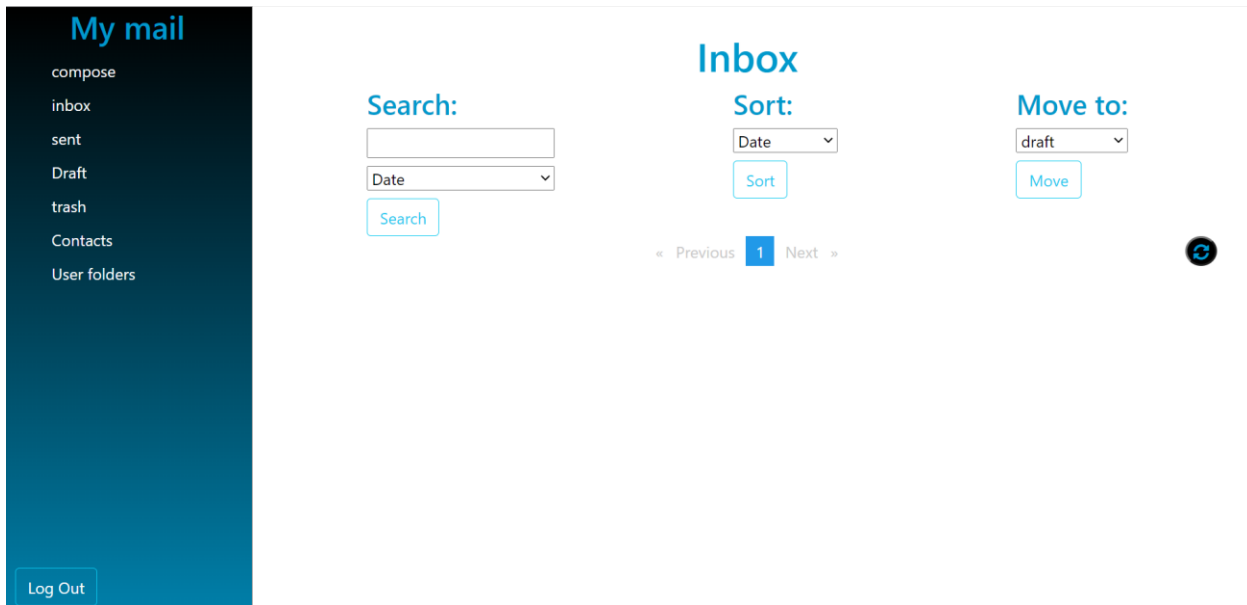

You can log in through this page

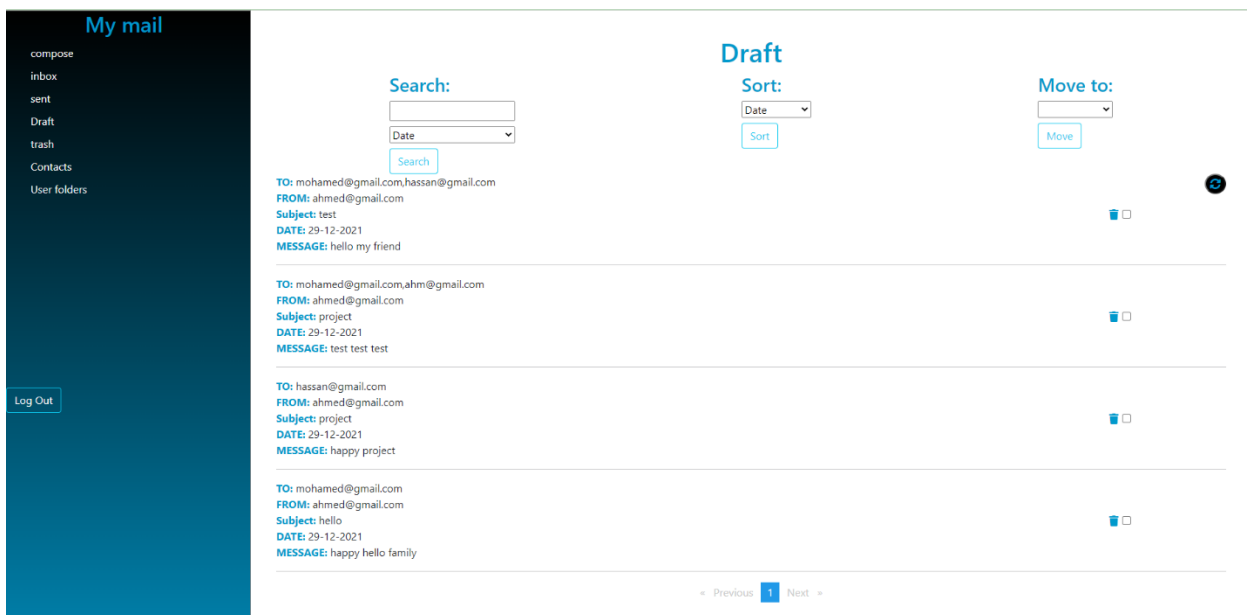

When you write a correct email and password the compose component will be displayed.

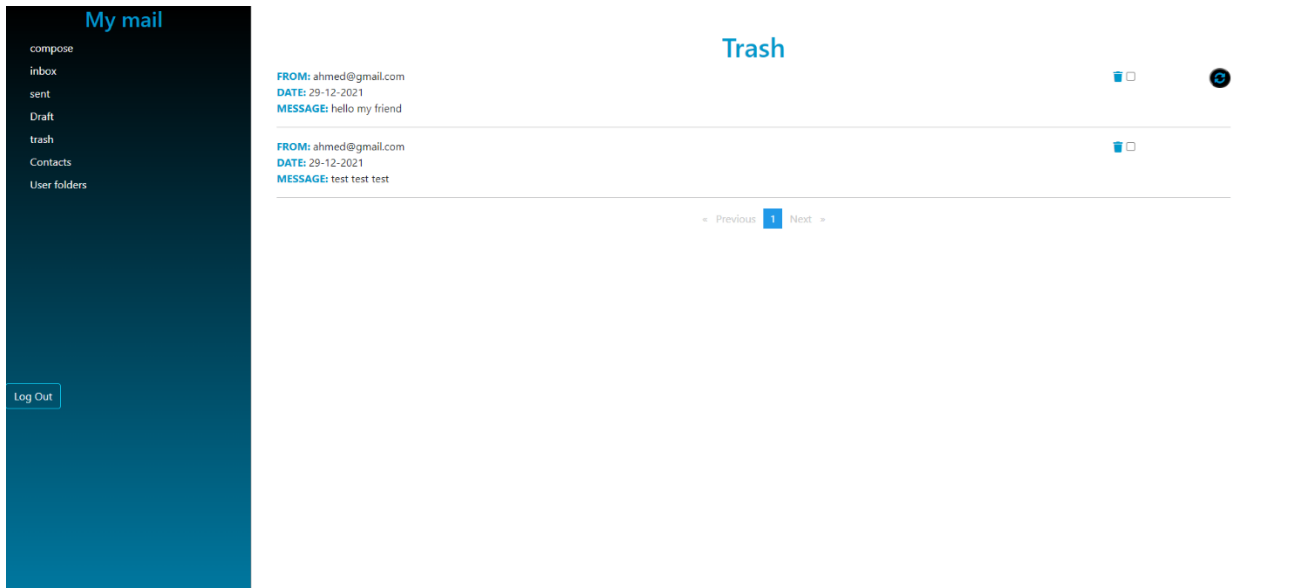

The plus button increases the "to" input to make to multiple emails and send check that the to email is valid email.

The "to" draft button put this message in the draft.

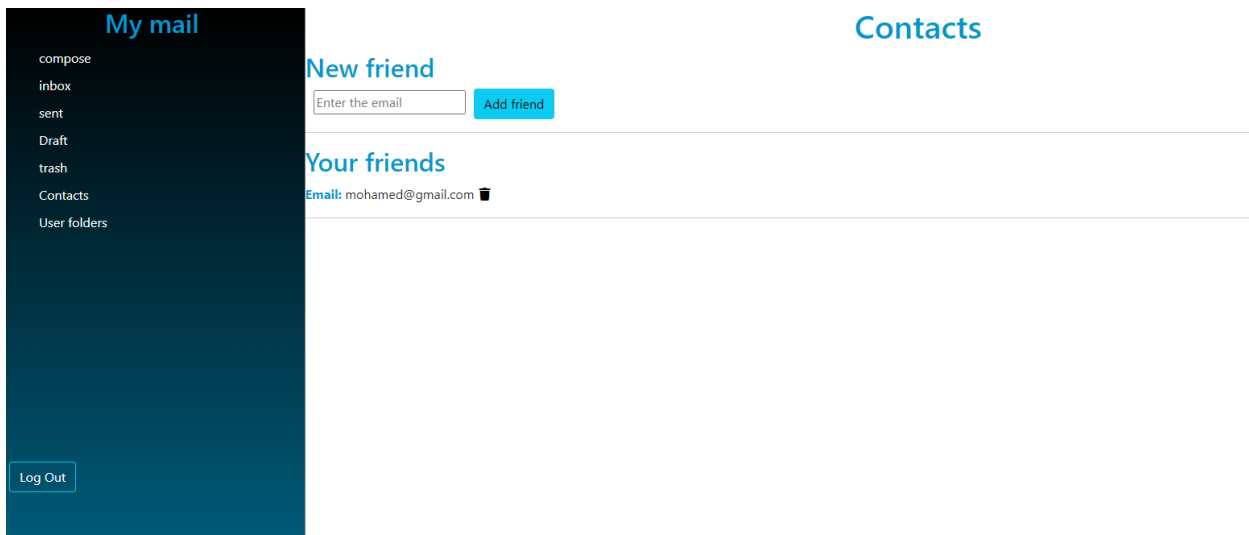

The inbox component We used pagination, there is refresh button, you can search with date, sender, receiver, body, attachment and priority, you can sort with subject, sender, date and priority and you can move any message by selecting it.

In the draft component, the sent component and the trash, it is like inbox component

In the contacts component, you can add friends and your friends will be shown.

And in the user folders component, you can create new folder, rename a folder, delete any folder and show any folder.

- **UMI**
